

BOOKFLOW_EXPERIMENT 5

pgadmin4

The screenshot displays the pgAdmin 4 interface. On the left, the 'Servers' tree shows 'PostgreSQL 18' with 'Databases (2)' including 'bookflow_db' and 'postgres'. The 'bookflow_db' database is selected, showing its schema objects. The main pane shows a SQL query in the 'Query' tab:

```
1 ALTER TABLE books
2 ADD COLUMN isbn VARCHAR(13),
3 ADD COLUMN price NUMERIC(10,2),
4 ADD COLUMN published_date DATE;
5 SELECT * FROM books;
```

The 'Data Output' tab shows the results of the query. It displays 5 rows of data with columns: id [PK] integer, title character varying (200), author character varying (200), and description text.

	id [PK] integer	title character varying (200)	author character varying (200)	description text
1	1	The Martian	Andy Weir	A stranded a
2	2	Dune	Frank Herbert	A science-fi
3	3	Pride and Prejudice	Jane Austen	A classic st
4	4	The Hobbit	J.R.R. Tolkien	A fantasy ad
5	5	...	...	...

A green notification box at the bottom right states: 'Successfully run. Total query runtime: 259 msec. 5 rows affected.'

The status bar at the bottom shows 'Total rows: 5', 'Query complete 00:00:00.259', 'CRLF', and 'Ln 5, Col 21'.
